

TrimSpend

Pitch by:
Saanvi Krishnarajpet & Jahzara
McLaughlin

Trim the waste. Keep what matters.

THE PROBLEM

People **STRUGGLE** to manage everyday spending.

- Most people do not consistently track their spending
- Overspending is often realized **after purchases are made**
- Existing budgeting apps track spending but do not actively help reduce it

TARGET USERS

College students learning to manage their finances independently.

Typical Spending Categories:

- Food and dining
- Transportation
- Retail purchases
- Subscriptions and entertainment

Common Pain points:

- Frequent small purchases add up quickly
- Limited budgeting experience
- Lack of tools that actively help reduce spending

USER RESEARCH INSIGHTS

Survey of 32 participants ages 17-24

- **54.8%** only track spending occasionally, and very few track it regularly
- **Over 80%** said they sometimes or often realize they overspend after purchases
- **84.4%** have never used a financial tracking app
- Food, retail, and transportation are the biggest spending categories

FEATURE VALIDATION:

- **86.7%** said cheaper product recommendations would be useful
- **93.5%** were interested in a visual tool to reduce spending

COMPETITOR ANALYSIS

Current financial apps show where money is spent, but they do not actively help users reduce spending

Mint- Automatic budgeting and financial tracking

Tracks spending but does not help users reduce it

Rocket Money- Subscription tracking and bill negotiation

Focuses on monitoring expenses rather than improving spending habits

Banking apps- Transaction monitoring and basic budgeting tools

Provides financial visibility but limited guidance for reducing spending

TrimSpend fills this gap.

- Visual spending insights
- Trim interaction to reduce overspending
- AI-powered cheaper alternatives

TrimSpend transforms financial tracking into actionable spending optimization.

OUR SOLUTION

Instead of simply showing where money goes, TrimSpend helps users take action to spend less.

TrimSpend

Key Features:

- **Spending Dashboard**- visual breakdown of spending categories
- **Trim Overspending Tool**- users visually “trim” categories to see how reducing spending improves their budget
- **Cheaper Product Alternatives**- suggests lower-cost brands and purchases
- **Trim Score**- tracks how much users save and encourages better financial habits

DEMO

[Figma Demo Link](#)

AI-POWERED FEATURES

- **AI Spend DNA**- analyzes transaction patterns to identify spending habits
- **Smart Overspending Dection**- alerts users when spending exceeds typical behavior
- **Cheaper Alternatives Engine**- recommends lower-cost brands and products
- **Predictive Savings Insights**- shows how small spending changes impact long-term savings
- **Personalized Trim Suggestions**- recommends categories where users can reduce spending

IMPACT

TrimSpend helps college students reduce everyday spending and financial stress.

Real-World Problems:

- College students spend over **\$400/month** on off-campus food alone
- **57%** of young adults make financial decisions influenced by others' lifestyles
- Financial stress is a major factor in academic challenges and student dropout

How TrimSpend Helps:

- Identifies unnecessary spending in high-frequency categories like food and retail
- Encourages smarter purchasing decisions through cheaper alternatives
- Creates measureable impact (ie. Reducing just **\$50/week** in overspending = **\$2,600 saved per year**)

THANK

YOU!
